## INDUCTION.

SCENE I.—*Between submission and decision.*

*Enter REVIEWER and AUTHORS.*

- 1 *Rev.* What is this? Is this not against the rules?
- 2 *Auth.* The columns? These are only simple tables.
- 3 They serve to help us implement blank verse.
- 4 The script-sized numbers count the spoken lines,
- 5 They disappear when folks use prose at times.
- 6 We introduce a novel dataset,

With full documentation as Appendix.	7
Raw data stem from all of Shakespeare's plays [14],	8
We model them as graphs in many ways,	9
And demonstrate representations matter.	10
The data readily accessible [6],	11
All code is publicly available [7].	12
What follows, to avoid redundancy,	13
Conveys our main ideas, as you will see	14
A tragedy in the Community.	15

# Summary

# Summary

1. Graph data does not exist, it is defined.
2. Semantic mapping, granularity, and expressivity are key ingredients to define graph representations.
3. Many phenomena permit several graph representations.
4. Graph data context matters for graph representations.
5. Graph data representations matter for graph methods.
6. Hypergraphs are powerful.
7. HYPERBARD is free.

<i>Col.</i> A datasheet [8]? Well—all the world is data,	159
And all we care for merely data points;	160
They get created, updated, deleted,	161
And every data point plays many parts,	162
Its fate being seven stages. First, <i>motivation</i>	163
Defining purpose or specific tasks.	164
Then <i>composition</i> , sketching the raw data	165
And telling people where it was obtained,	166
If anything's amiss. And then <i>collection</i> ,	167
How did we get each single data point,	168
And what else did we check. Then <i>preprocessing</i> ,	169
Full of strange quirks and idiosyncrasies,	170
But made that it looks principled. Then <i>uses</i> ,	171
What all things did we do, what could have been,	172
And what should not be done. Then <i>distribution</i> ,	173
If, when, and how will we make data public,	174
Restrictions by third parties, if imposed,	175
And also all the laws. Last stage of all,	176
That ends this template documentary,	177
Is <i>maintenance</i> and hosting and support,	178
Sans updates, sans errata, sans comment.	179

## Jon’s Speech in *As You Like It*

184 Two souls, alas, are dwelling in my breast,  
185 And each one seeks to rule without the other.  
186 The one a falcon, fierce and fighting fetters,  
187 That’s dreaming of faun’s forest, flying free,  
188 The other a caged chary canary,  
189 That calmly, coyly, cheerfully chants chatters.

### FIRST DEADLINE *sings*.

303 Come back to the office lands,  
304 Don't take a chance:  
305 Meta fair but be aware  
306 In camera, better prepare  
307 Fix your figures here and there;  
308 And review two the burden bear.

309 *Cre.* Where should this music be? I know the beat.  
310 It sounds no more? No, it begins again.

### SECOND DEADLINE *sings*.

311 To taller skies your metrics rise;  
312 Publish, perish, stars are made;  
313 Do not whine, stay in line,  
314 Otherwise your glory fade.  
315 Dutifully use your wit  
316 And then submit.

# Inspiration

319 *Cre.* To flee or PhD—that is the question:  
320 Whether our destiny lies in the system,  
321 To cling onto scientific ladder’s rungs,  
322 Or to renounce the reign of rules unwritten  
323 And, by opposing, vanish. To flee, to think—  
324 To think, perchance discover. Ay, there’s the rub,  
325 For once outside the pithy paywalled castles,  
326 The giant’s shoulders quickly out of reach,  
327 For lack of funding. There’s cautiousness  
328 That crafts careers of so long strive,  
329 And makes us rather swarm the conference streams  
330 Than swim the savage seas so far uncharted.  
331 Thus mellow meal the mighty mills of science,  
332 And conscience can coerce our compliance.

## Hamlet’s Monologue in *Hamlet*

*Gra.* Full many a transformation have I seen  
Flatter the flora with their sovereign hand,  
And sovereign’s hand in spirit I’ll have been  
To help evaluate their promised land.  
Community, defined as uninvolved  
With hideous beauty born by Mother Earth  
Begets solutions without problems solved  
And burns the flame of wonder in Its dearth.  
When culture counters nature, it prevails,  
And builds its truths from rigid rigor bricks,  
As myriad feeble fledglings it derails  
Into the cave of engineering tricks.  
For in the trenches of discovery,  
To shatter shadows, meet obscurity.
